

eilynjimenez_ If you think your pet is safe with your pet sitter, think again.

On August 29, 2025, while we were away, our 12-year-old Shih Tzu, Aria, died in the care of a [@roverdotcom](#) sitter in Miami, named [REDACTED]

When we returned home two days later, the sitter came to our door crying, saying Aria “passed peacefully in her sleep.” She told us a “vet friend named [REDACTED]” had confirmed it and even texted us under that name, claiming Aria had died from a heart attack.

Every part of that story was fabricated.

Cremation records show Aria’s body was brought in the same day she died — by the sitter’s partner, [REDACTED] — with a “rush” request. When the cremation center staff asked what happened, the partner admitted Aria had been killed by a larger dog. They described visible trauma: her scalp detached, one eye bulging — injuries impossible to confuse with a peaceful passing.

The sitter was never even in Miami. She was in Las Vegas, competing in a jiu-jitsu tournament representing [REDACTED] while our dog was left with her partner and around bigger dogs we never approved. They cremated Aria without our consent — erasing evidence and concealing what happened. The “vet friend” wasn’t a veterinarian at all; the number traced back to [REDACTED]

We have given them every opportunity to come forward with the truth, yet they continue to hide behind lies. Mistakes can happen. But fabricating a story this elaborate to avoid accountability is not a mistake — it’s deception.

Aria deserved better.

All we want is the truth, and accountability for the life that was lost.
